

TENSION SCREW ADJUSTMENT INSTRUCTIONS

DeSantis Strongly recommends that make certain your gun is fully unloaded by first removing the magazine, then clearing the chamber before making any initial adjustments to this or any other holster.

This DeSantis holster is fitted with a tension screw adjustment. The tension is not preset at the factory. This tension may need to be adjusted the first time you holster your gun.. It is at this point that you can make any permanent adjustments to the tension you desire. We recommend that you check the screw adjustments before each use.
